INTRODUCTION

IT'S OUR AIM TO PROVIDE MAXIMUM SUPPORT TO OUR CLIENTS WITH RELIABLE, HIGH QUALITY PRODUCTS & SERVICES ON TIME, WITHIN BUDGET, WORKING CLOSELY WITH YOUR REPRESENTATIVES TO ENSURE DESIRED RESULTS.

OUR VISION

- ◆ *To be a unique company at the level of the kingdom, with multiple investments, also to be able to lead and participate in the development of projects and companies with a studied scientific methodology, and strategic investments in major companies. To invest our experience and values of growth at all levels in order to become pioneers in the global market and provide engineering excellence to customers and achieve the highest level of value by adhering to best practices in terms of governance and transparency. We strive to establish our position as a leading company and partner in the construction, development of projects, business excellence and sustainable.*

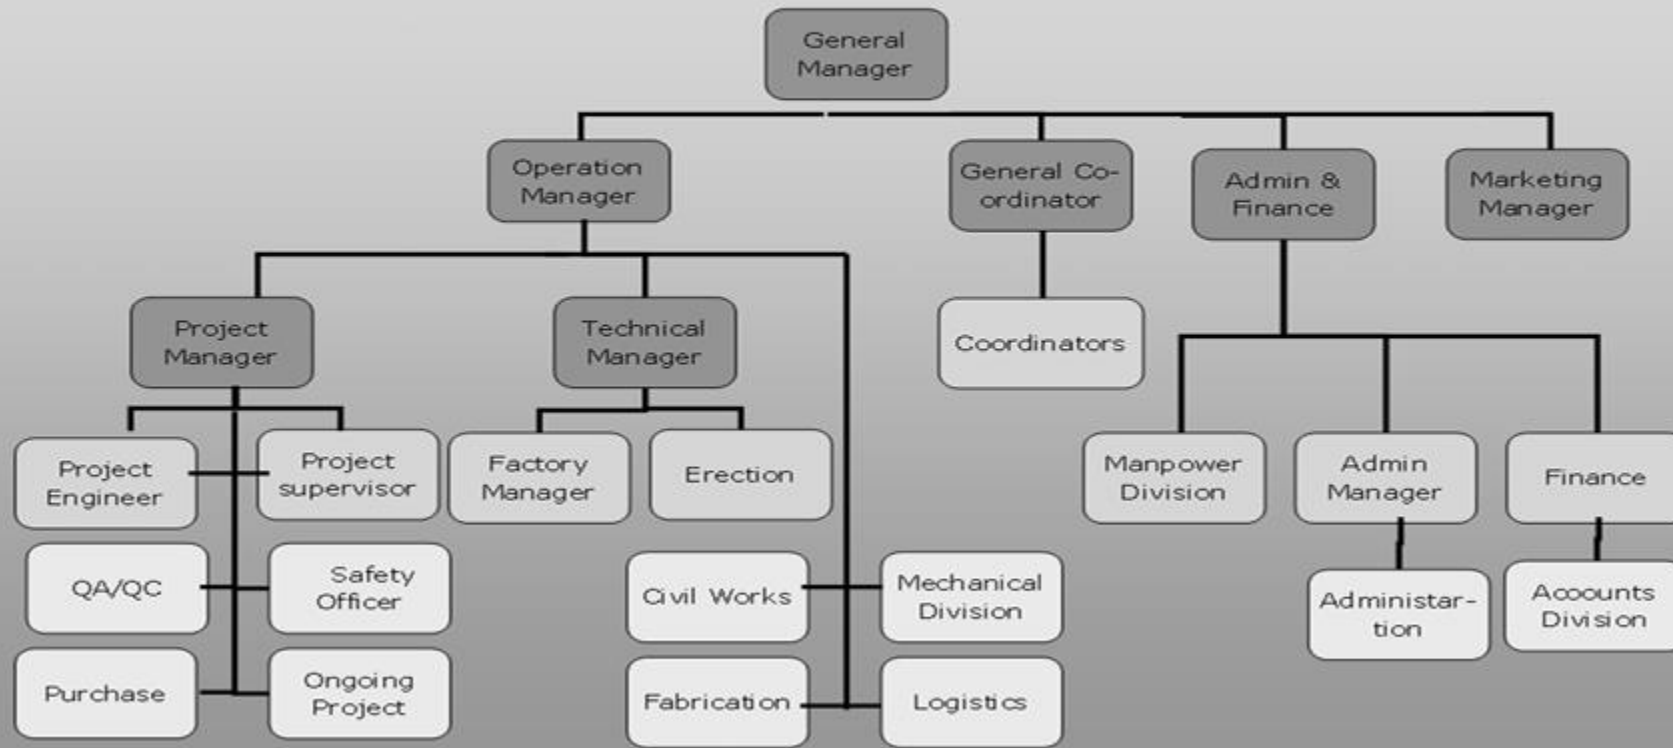

The Services We Render

1. General Contracting
2. Sandblasting & Painting
3. Steel Fabrication
4. Erection & commissioning
5. Firefighting & Safety
6. Aluminum Cladding & insulation
7. Site Preparation
8. Concrete
9. Structural and framing
10. Roofing, siding, and sheet metal work
11. Plumbing
12. HVAC
13. Electrical
14. Carpentry
15. Drywall
16. Painting and Paper hanging
17. Waterproofing
18. Rental equipment

THE BELOW CHART SHOWS HOW OUR COMPANY WORKS AND HOW MANY SUB CATEGORIES ARE PRESENT TO CATER OUR CLIENTS

Organization Chart Title

SITE PREPARATION:

Before a project start, we prepare a site inspection and prepare a surface preparation of the site for construction. This type of will bring heavy equipment to the job site, prepare a driveway, remove trees, level the property, and excavate the area for the foundation sub-structure and super-structure for all types of projects

CONCRETE :

The subcontractor that pours the foundation, footings, or other cementitious structures is the concrete contractor. Generally, this contractor enters a contract directly to lay the groundwork for the project. Might also pour the driveway concrete or walkways and patios on finished projects. Concrete contractors may also work with and install precast concrete materials such as walls, beams, and culverts. Precast concrete is a process in which concrete building components are poured in an offsite location and then delivered to the site to be installed

STRUCTURAL FRAMING

A building's structure and framing could be made from various types of materials including wood, steel, and concrete. Some GCs may handle wood framing themselves, but they may also hire a framing subcontractor to build the structural components for the walls and roofs of the project. Framing and structural contractors may also install exterior sheathing, windows, and exterior doors. On large projects glass, metal siding, and roofing may be performed by other types of subcontractors. For large steel structure projects, a steel erection contractor will be necessary, and they'll typically hire a crane company as a sub-subcontractor

ROOF SIDING AND SHEET METAL WORK

When it comes to drying-in the building envelope, the process of sufficiently enclosing the building and protecting interiors from external weather conditions, GCs will typically hire subcontractors to do the job. These roofing, siding, glazing, stucco and sheet metal contractors specialize in this line of work. Many of these contractors work with Prefabricated materials build in their shop prior to installation. By having prefabricated windows, wall panels, and roof sections, they can move quickly to enclose the building so interior build-out can begin

PLUMBING

The primary focus for plumbers is to get water into and out of the building. Plumbing contractors will install the waste lines, vents, and water pipes in a building or renovation. They'll also tie into the city water lines or well water. They may also hire a septic contractor or excavation contractor to install tanks and leach fields, though the GC might hire them themselves. Mechanical contractors will often take on the plumbing scope of a project in addition to HVAC and gas

HVAC

Heating, ventilation, and air conditioning (HVAC) subcontractors are responsible for ensuring a building's climate is safe and comfortable for occupants. Interior climate control requires very technical knowledge and experience, and it's a job best left to the HVAC contractor. These contractors will install boilers, furnaces, ductwork, air conditioners, and other mechanical equipment to help keep the building comfortable. HVAC contractors are often referred to as mechanical contractors, and they may also take on other scopes such as plumbing and gas

Waterproofing

Building with protection against the elements! Waterproof construction involves designing and building structures to prevent water from penetrating the building envelope, ensuring a safe, dry, and healthy indoor environment.

This type of construction is crucial in areas prone to heavy rainfall, flooding, or high humidity.

Waterproofing materials and techniques are used to seal gaps, joints, and surfaces, preventing water ingress and damage to the building.

ELECTRICAL

Electrical contractors are necessary on every job site. This contractor installs electrical panels, wires, fixtures, generators, transfer switches, and other electrical gear for which a GC doesn't carry a license. For new or highly renovated projects, electrical contractors are also responsible for setting up temporary power to be used during the building process. Electricians interact with every trade on the job and need access to every drawing section including mechanical schedules, architectural elevations, and shop drawings to coordinate equipment feed size and locations.

CARPENTRY

While the bulk of the structure is typically performed by the framing contractor or GC, much of the interior work goes to the carpentry subcontractor. Carpenters take on various types of interior finishes work from millwork – such as trim, cabinetry, and interior doors – to floors and decorative interior accents. Carpenters may specialize in different types of interior work based on their size. For example, a subcontractor may only do doors, trim, and cabinetry but not flooring

MASONRY AND STONEMWORK

The brick and stone surfaces on a project are typically left to contractors who specialize in the trade. Masonry and stonework contractors have the job-specific tools and equipment to work with these tough materials and the knowledge and skill required to lay courses of brick or blocks in straight lines. A masonry contractor may take on small scale or repair concrete work as well

DRYWALL

Drywall contractors specialize in the installation, repair, and finishing of drywall. Most types of construction projects whether residential or commercial – require interior drywall, so their services are in high demand . Drywall contractors are responsible for installing the panels of drywall onto the framing of walls and ceilings, using screws and joint tape to secure the panels in place. Sometimes drywall contractors will also perform light gauge interior framing. Depending on a drywaller's capabilities and how the GC contracts the project, these contractors may also apply texture and paint or wallpaper to the drywall

PAINTING TEXTURE AND PAPER HANGING

When it comes to bringing a space to life with color and patterns, the GC will hire a painting and paper hanging contractor. Painting contractors specialize in painting both the interior and exterior surfaces of all types of projects. They begin their process by preparing surfaces for painting, including masking, sanding, priming, and caulking. Painting contractors have a keen eye for detail and a deep understanding of the various types of paint and coatings, as well as the techniques required to achieve a high-quality, long-lasting finish

TILE SETTING

Any of the tile work, whether it be flooring, shower spaces, backsplashes, lobbies, or accent walls, will go to a specialty tile-setting contractor. Like other specialties, this contractor has the job-specific tools to handle the project. They also know which materials work best and how to get their hands on rare or unique tiles. Sometimes tile setters will specialize in laying other types of flooring such as wood or vinyl.

Rental equipment's

Heavy machinery for hire! Rental construction equipment provides a cost-effective solution for contractors, builders, and DIYers who need specialized machinery for a specific project or period.

1. Cranes
2. Excavators
3. Bulldozers
4. Scissor lifts
5. Boom lifts
6. Forklifts
7. Mixers & pumps
8. Finishing machines
9. Generators
10. Compressors
